

## 연습문제 7.2

15-b)

$$55. \sum_{n=1}^{\infty} \left( \frac{1}{n} - \frac{1}{n+2} \right) = \left( 1 - \frac{1}{3} \right) + \left( \frac{1}{2} - \frac{1}{4} \right) + \left( \frac{1}{3} - \frac{1}{5} \right) + \left( \frac{1}{4} - \frac{1}{6} \right) + \cdots = 1 + \frac{1}{2} = \frac{3}{2}, \text{ converges}$$

15-c)

$$57. \sum_{n=1}^{\infty} \frac{3n-1}{2n+1}$$

$$\lim_{n \rightarrow \infty} \frac{3n-1}{2n+1} = \frac{3}{2} \neq 0$$

Diverges by Theorem 7.9

15-f)

$$63. \text{ Since } n > \ln(n), \text{ the terms } a_n = \frac{n}{\ln(n)}$$

do not approach 0 as  $n \rightarrow \infty$ . Hence, the series

$$\sum_{n=2}^{\infty} \frac{n}{\ln(n)} \text{ diverges.}$$

15-h)

$$67. \lim_{n \rightarrow \infty} \arctan n = \frac{\pi}{2} \neq 0$$

Hence,  $\sum_{n=1}^{\infty} \arctan n$  diverges.

17-a)

$$75. \sum_{n=1}^{\infty} \frac{x^n}{2^n} = \sum_{n=1}^{\infty} \left( \frac{x}{2} \right)^n = \frac{x}{2} \sum_{n=0}^{\infty} \left( \frac{x}{2} \right)^n$$

Geometric series: converges for  $\left| \frac{x}{2} \right| < 1$  or  $|x| < 2$

$$\begin{aligned} f(x) &= \frac{x}{2} \sum_{n=0}^{\infty} \left( \frac{x}{2} \right)^n \\ &= \frac{x}{2} \frac{1}{1 - (x/2)} = \frac{x}{2} \frac{2}{2 - x} = \frac{x}{2 - x}, \quad |x| < 2 \end{aligned}$$

17-d)

$$81. \sum_{n=0}^{\infty} \left( \frac{1}{x} \right)^n$$

Geometric series: converges if  $\left| \frac{1}{x} \right| < 1$

$$\Rightarrow |x| > 1 \Rightarrow x < -1 \text{ or } x > 1$$

$$f(x) = \sum_{n=0}^{\infty} \left( \frac{1}{x} \right)^n = \frac{1}{1 - (1/x)} = \frac{x}{x - 1}, \quad x > 1 \text{ or } x < -1$$

연습문제 7.3

2

$$15. \sum_{n=1}^{\infty} \frac{n^{k-1}}{n^k + c}$$

$$\text{Let } f(x) = \frac{x^{k-1}}{x^k + c}.$$

$f$  is positive, continuous, and decreasing for  $x > \sqrt[k]{c(k-1)}$  since

$$f'(x) = \frac{x^{k-2}[c(k-1) - x^k]}{(x^k + c)^2} < 0$$

for  $x > \sqrt[k]{c(k-1)}$ .

$$\int_1^{\infty} \frac{x^{k-1}}{x^k + c} dx = \left[ \frac{1}{k} \ln(x^k + c) \right]_1^{\infty} = \infty$$

Diverges by Theorem 7.10

6

$$27. \sum_{n=2}^{\infty} \frac{1}{n(\ln n)^p}$$

If  $p = 1$ , then the series diverges by the Integral Test.

If  $p \neq 1$ ,

$$\int_2^{\infty} \frac{1}{x(\ln x)^p} dx = \int_2^{\infty} (\ln x)^{-p} \frac{1}{x} dx = \left[ \frac{(\ln x)^{-p+1}}{-p+1} \right]_2^{\infty}.$$

Converges for  $-p+1 < 0$  or  $p > 1$

10-b)

$$35. S_4 = \frac{1}{e} + \frac{2}{e^4} + \frac{3}{e^9} + \frac{4}{e^{16}} \approx 0.4049$$

$$R_4 \leq \int_4^{\infty} x e^{-x^2} dx = \left[ -\frac{1}{2} e^{-x^2} \right]_4^{\infty} = \frac{e^{-16}}{2} \approx 5.6 \times 10^{-8}$$

$$0.4049 \leq \sum_{n=1}^{\infty} n e^{-n^2} \leq 0.4049 + 5.6 \times 10^{-8}$$

12-b)

$$43. 0 < \frac{1}{3^n + 1} < \frac{1}{3^n}$$

Therefore,

$$\sum_{n=0}^{\infty} \frac{1}{3^n + 1}$$

converges by comparison with the convergent geometric series

$$\sum_{n=0}^{\infty} \left(\frac{1}{3}\right)^n.$$

12-c)

$$45. \text{ For } n \geq 3, \frac{\ln n}{n+1} > \frac{1}{n+1} > 0.$$

Therefore,

$$\sum_{n=1}^{\infty} \frac{\ln n}{n+1}$$

diverges by comparison with the divergent series

$$\sum_{n=1}^{\infty} \frac{1}{n+1}.$$

**Note:**  $\sum_{n=1}^{\infty} \frac{1}{n+1}$  diverges by the Integral Test.

13-e)

$$59. \lim_{n \rightarrow \infty} \frac{(n^{k-1})/(n^k + 1)}{1/n} = \lim_{n \rightarrow \infty} \frac{n^k}{n^k + 1} = 1$$

Therefore,

$$\sum_{n=1}^{\infty} \frac{n^{k-1}}{n^k + 1}$$

diverges by a limit comparison with the divergent  $p$ -series

$$\sum_{n=1}^{\infty} \frac{1}{n}.$$

13-f)

$$\begin{aligned} 61. \lim_{n \rightarrow \infty} \frac{\sin(1/n)}{1/n} &= \lim_{n \rightarrow \infty} \frac{(-1/n^2) \cos(1/n)}{-1/n^2} \\ &= \lim_{n \rightarrow \infty} \cos\left(\frac{1}{n}\right) = 1 \end{aligned}$$

Therefore,

$$\sum_{n=1}^{\infty} \sin\left(\frac{1}{n}\right)$$

diverges by a limit comparison with the divergent  $p$ -series

$$\sum_{n=1}^{\infty} \frac{1}{n}.$$

## 연습문제 7.4

1-b)

$$3. \sum_{n=1}^{\infty} \frac{(-1)^n n^2}{n^2 + 1}$$

$$\lim_{n \rightarrow \infty} \frac{n^2}{n^2 + 1} = 1. \text{ Thus, } \lim_{n \rightarrow \infty} a_n \neq 0.$$

Diverges by the  $n$ th-Term Test

1-d)

$$7. \sum_{n=1}^{\infty} \frac{(-1)^{n+1}(n+1)}{\ln(n+1)}$$

$$\lim_{n \rightarrow \infty} \frac{n+1}{\ln(n+1)} = \lim_{n \rightarrow \infty} \frac{1}{1/(n+1)} = \lim_{n \rightarrow \infty} (n+1) = \infty$$

Diverges by the  $n$ th-Term Test

1-f)

$$11. \sum_{n=0}^{\infty} \frac{(-1)^n}{n!}$$

$$a_{n+1} = \frac{1}{(n+1)!} < \frac{1}{n!} = a_n$$

$$\lim_{n \rightarrow \infty} \frac{1}{n!} = 0$$

Converges by Theorem 7.14

1-h)

$$15. \sum_{n=1}^{\infty} \frac{(-1)^{n+1} n!}{1 \cdot 3 \cdot 5 \cdots (2n-1)}$$

$$a_{n+1} = \frac{(n+1)!}{1 \cdot 3 \cdot 5 \cdots (2n-1)(2n+1)} = \frac{n!}{1 \cdot 3 \cdot 5 \cdots (2n-1)} \cdot \frac{n+1}{2n+1} = a_n \left( \frac{n+1}{2n+1} \right) < a_n$$

$$\lim_{n \rightarrow \infty} a_n = \lim_{n \rightarrow \infty} \frac{n!}{1 \cdot 3 \cdot 5 \cdots (2n-1)}$$

$$= \lim_{n \rightarrow \infty} \frac{1 \cdot 2 \cdot 3 \cdots n}{1 \cdot 3 \cdot 5 \cdots (2n-1)}$$

$$= \lim_{n \rightarrow \infty} 2 \left[ \frac{3}{3} \cdot \frac{4}{5} \cdot \frac{5}{7} \cdots \frac{n}{2n-3} \right] \cdot \frac{1}{2n-1} = 0$$

Converges by Theorem 7.14

6-b)

$$29. \sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{2n^3 - 1}$$

By Theorem 7.15,

$$|R_N| \leq a_{N+1} = \frac{1}{2(N+1)^3 - 1} < 0.001.$$

This inequality is valid when  $N = 7$ . Use 7 terms.

N은 7이상

7-a)

$$31. \sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{(n+1)^2}$$

$\sum_{n=1}^{\infty} \frac{1}{(n+1)^2}$  converges by comparison to the  $p$ -series

$$\sum_{n=1}^{\infty} \frac{1}{n^2}.$$

Therefore, the given series converges absolutely.

7-c)

$$35. \sum_{n=2}^{\infty} \frac{(-1)^n}{\ln n}$$

The given series converges by the Alternating Series Test but does not converge absolutely since the series

$\sum_{n=2}^{\infty} \frac{1}{\ln n}$  diverges by comparison to the harmonic series

$\sum_{n=1}^{\infty} \frac{1}{n}$ . Therefore, the series converges conditionally.

7-e)

$$39. \sum_{n=0}^{\infty} \frac{\cos n\pi}{n+1} = \sum_{n=0}^{\infty} \frac{(-1)^n}{n+1}$$

The given series converges by the Alternating Series Test, but

$$\sum_{n=0}^{\infty} \frac{|\cos n\pi|}{n+1} = \sum_{n=0}^{\infty} \frac{1}{n+1}$$

diverges by a limit comparison to the divergent harmonic series,

$$\sum_{n=1}^{\infty} \frac{1}{n}.$$

$\lim_{n \rightarrow \infty} \frac{|\cos n\pi|/(n+1)}{1/n} = 1$ , therefore the series converges conditionally.

8-a)

$$43. \sum_{n=0}^{\infty} \frac{n!}{3^n}$$

$$\lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{(n+1)!}{3^{n+1}} \cdot \frac{3^n}{n!} \right|$$

$$= \lim_{n \rightarrow \infty} \frac{n+1}{3} = \infty$$

Therefore, by the Ratio Test, the series diverges.

8-c)

$$47. \sum_{n=1}^{\infty} \frac{2^n}{n^2}$$

$$\lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{2^{n+1}}{(n+1)^2} \cdot \frac{n^2}{2^n} \right|$$

$$= \lim_{n \rightarrow \infty} \frac{2n^2}{(n+1)^2} = 2$$

Therefore, by the Ratio Test, the series diverges.

8-e)

$$51. \sum_{n=1}^{\infty} \frac{n!}{n3^n}$$

$$\lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{(n+1)!}{(n+1)3^{n+1}} \cdot \frac{n3^n}{n!} \right|$$

$$= \lim_{n \rightarrow \infty} \frac{n}{3} = \infty$$

Therefore, by the Ratio Test, the series diverges.

10-a)

$$63. \sum_{n=1}^{\infty} \left( \frac{n}{2n+1} \right)^n$$

$$\lim_{n \rightarrow \infty} \sqrt[n]{|a_n|} = \lim_{n \rightarrow \infty} \sqrt[n]{\left( \frac{n}{2n+1} \right)^n}$$

$$= \lim_{n \rightarrow \infty} \frac{n}{2n+1} = \frac{1}{2}$$

Therefore, by the Root Test, the series converges.

10-c)

$$67. \sum_{n=1}^{\infty} (2\sqrt[n]{n} + 1)^n$$

$$\lim_{n \rightarrow \infty} \sqrt[n]{|a_n|} = \lim_{n \rightarrow \infty} \sqrt[n]{(2\sqrt[n]{n} + 1)^n} = \lim_{n \rightarrow \infty} (2\sqrt[n]{n} + 1)$$

To find  $\lim_{n \rightarrow \infty} \sqrt[n]{n}$ , let  $y = \lim_{n \rightarrow \infty} \sqrt[n]{n}$ . Then

$$\ln y = \lim_{n \rightarrow \infty} (\ln \sqrt[n]{n}) = \lim_{n \rightarrow \infty} \frac{1}{n} \ln n = \lim_{n \rightarrow \infty} \frac{\ln n}{n} = \lim_{n \rightarrow \infty} \frac{1/n}{1} = 0.$$

Thus,  $\ln y = 0$ , so  $y = e^0 = 1$  and  $\lim_{n \rightarrow \infty} (2\sqrt[n]{n} + 1) = 2(1) + 1 = 3$ . Therefore, by the Root Test, the series diverges.

10-e)

$$71. \sum_{n=1}^{\infty} \left( \frac{1}{n} - \frac{1}{n^2} \right)^n$$

$$\begin{aligned} \lim_{n \rightarrow \infty} \sqrt[n]{|a_n|} &= \lim_{n \rightarrow \infty} \sqrt[n]{\left( \frac{1}{n} - \frac{1}{n^2} \right)^n} \\ &= \lim_{n \rightarrow \infty} \left( \frac{1}{n} - \frac{1}{n^2} \right) = 0 - 0 = 0 < 1 \end{aligned}$$

Hence, the series converges.

18

$$113. \sum_{n=1}^{\infty} (-1)^n \frac{1}{n^p}$$

If  $p = 0$ , then  $\sum_{n=1}^{\infty} (-1)^n$  diverges.

If  $p < 0$ , then  $\sum_{n=1}^{\infty} (-1)^n n^{-p}$  diverges.

If  $p > 0$ , then  $\lim_{n \rightarrow \infty} \frac{1}{n^p} = 0$  and

$$a_{n+1} = \frac{1}{(n+1)^p} < \frac{1}{n^p} = a_n.$$

Therefore, the series converges for  $p > 0$ .
